

PASO #1

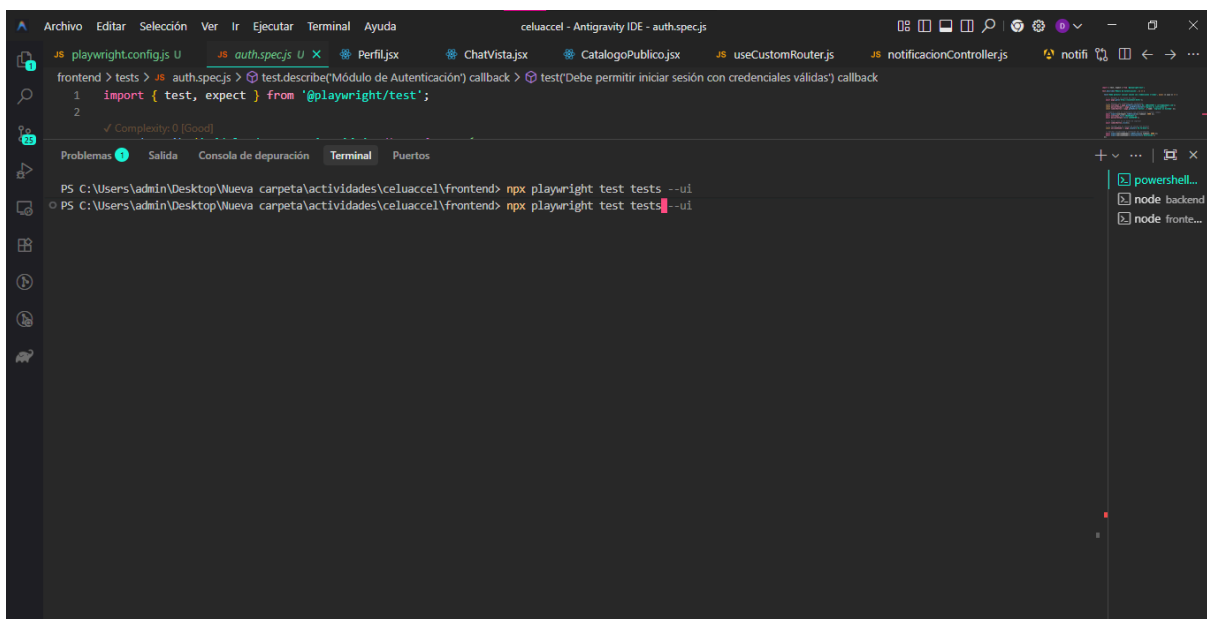

The screenshot shows the Visual Studio Code editor with a file named `auth.spec.js` open. The code is a Playwright test for an authentication page. It includes comments in Spanish describing the steps: navigating to the login page, filling in the username and password, clicking the login button, and validating the session. The test is written in JavaScript using Playwright's `test` and `expect` functions. The terminal at the bottom shows the command `npm run test` being executed, and the output indicates that the tests passed successfully.

```
1 import { test, expect } from '@playwright/test';
2
3 test.describe('Módulo de Autenticación', () => {
4
5   test('Debe permitir iniciar sesión con credenciales válidas', async ({ page }) => {
6
7     // 1. Navegar a la página de Login
8     await page.goto('http://localhost:5173/');
9
10    // 2. Definir los elementos del formulario
11    const userInput = page.getByPlaceholder('Ej: 1001234567 o correo@ejemplo.com');
12    const passwordInput = page.getByPlaceholder('Ingresa tu contraseña');
13    const submitButton = page.getByRole('button', { name: 'Ingresar al Sistema' });
14
15    // Esperar a que el formulario sea interactivo y llenar campos
16    await expect(userInput).toBeVisible({ timeout: 5000 });
17    await userInput.fill('1022922817');
18    await passwordInput.fill('123456789');
19
20    // 3. Hacer clic en el botón de ingresar
21    await submitButton.click();
22
23    // 4. Validar que el inicio de sesión fue exitoso
```

PS C:\Users\admin\Desktop\Nueva carpeta\actividades\celuacel\frontend> npm run test

PASO#2

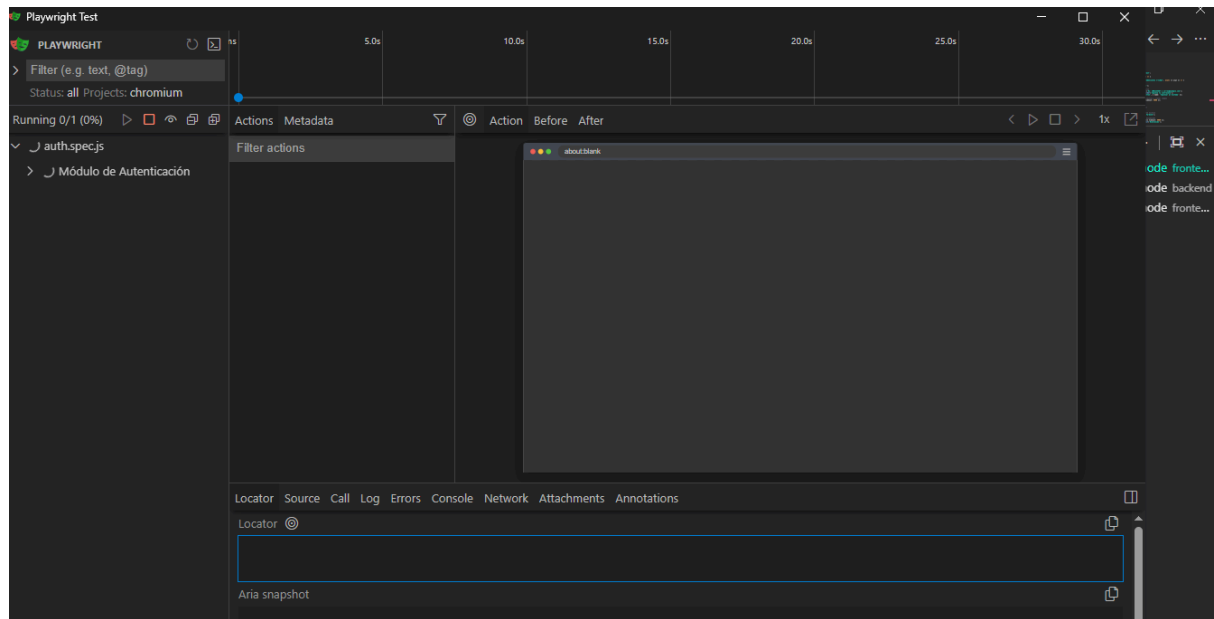

The screenshot shows the same Visual Studio Code editor with the `auth.spec.js` file. The terminal at the bottom shows the command `npm run test` being executed, and the output indicates that the tests passed successfully. The interface is similar to the first screenshot, but the terminal output is different, showing the command being run in a PowerShell prompt.

```
1 import { test, expect } from '@playwright/test';
2
3 test.describe('Módulo de Autenticación', () => {
4
5   test('Debe permitir iniciar sesión con credenciales válidas', async ({ page }) => {
6
7     // 1. Navegar a la página de Login
8     await page.goto('http://localhost:5173/');
9
10    // 2. Definir los elementos del formulario
11    const userInput = page.getByPlaceholder('Ej: 1001234567 o correo@ejemplo.com');
12    const passwordInput = page.getByPlaceholder('Ingresa tu contraseña');
13    const submitButton = page.getByRole('button', { name: 'Ingresar al Sistema' });
14
15    // Esperar a que el formulario sea interactivo y llenar campos
16    await expect(userInput).toBeVisible({ timeout: 5000 });
17    await userInput.fill('1022922817');
18    await passwordInput.fill('123456789');
19
20    // 3. Hacer clic en el botón de ingresar
21    await submitButton.click();
22
23    // 4. Validar que el inicio de sesión fue exitoso
```
